

## **CHAPTER 7**

### **CONCLUSION AND SUGGESTION**

#### **7.1 CONCLUSION**

This study showed that MLC601 has promising efficacy on long term clinical outcome and safety in the setting of non-surgical moderate TBI patients. This study showed that patients received MLC601 have better GOS and BI value compared to those who did not receive MLC601.

#### **7.2 SUGGESTION**

This study being a pilot one, would need to be confirmed further in a larger controlled trial using a longer duration of treatment.
